3	Run on localhost	1
4	Sample accounts	2
4.1	Admin	2
4.2	Normal user:	2

1 Requirement

The following guide is for below system:

- OS: Arch Linux
- LAMP stack installed
- git, composer installed

2 Run on remote host

Access: <http://leanhtai01.xyz>

3 Run on localhost

1. Clone from project from github:

```
$ git clone https://github.com/leanhtai01/leanhtai01-ecommerce
```

2. Change directory to project's root directory:

```
$ cd leanhtai01-ecommerce
```

3. Install project's dependencies:

```
$ composer update
```

4. Change directory to db_scripts directory

```
$ cd db_scripts
```

5. Create database and insert sample data (need root privilege)

```
$ mysql -u root -p < ecommerce_db.sql
```

```
$ mysql -u root -p < sample_data.sql
```

6. Copy/move project to Apache directory (e.g. public_html)

```
$ cd ../../
```

```
$ cp -r leanhtai01-ecommerce ~/public_html
```

7. Set Apache's environment variables as described in docs/environment_variables.docs.org

4 Sample accounts

4.1 Admin

- Email: admin@gmail.com
- Password: 123

4.2 Normal user:

- Email: votong@yahoo.com.vn
- Password: 123
